

Appendix A: Algorithm used to guide physicians to choose LMWH dosing.

Appendix B: General location of pulmonary emboli.

Appendix C: Time CTPA was done during hospitalization

Appendix D: Percentage of PE positive patients in the subgroups classifying dose of LMWH received.

Lobar involvement	Score
5% or less	1
5%-25%	2
26%-49%	3
50%-75%	4
>75%	5

Table 1: Individual lobar scores based on percentage involvement

Total Score (numerical)	Severity category
7 or less	Mild
8-17	Moderate
18 or more	Severe

Table 2: Sum of the individual lobar scores indicates the overall severity of the five lobes

Appendix E: Table used to calculate severity score based on HRCT chest analysis. Each lung lobe was given a score of 1-5 based on degree of parenchymal involvement, and the total was then calculated to categorize severity. [12]
